

CABLE TRANSPORT

With our own flat-top barge fleet, bespoke carousels, and all the associated lift equipment and storage you may need – it's Osprey's 25 years of marine heritage that deliver extra value.

Everything we learn from one cabling project, we always invest in the next.

CABLING EXPERTISE

Whether it's simply providing storage, or handling the multi-disciplined project plans that involve SPMT's to enable safe spooling and even reduce the need for an expensive carousel system – our experts are on hand, on the ground, and our complete range of specialist logistics' equipment is at your disposal.

We've transported cabling to many key offshore providers whose names you may recognise, and used restricted inland waterways to facilitate specialist, bespoke projects, too.

BESPOKE CABLING BASKETS

Cabling baskets are a specialist item. Osprey's cabling baskets are constructed to our own design, and we have a split cell cable basket that can hold two different types of cable (enabling each one to be used at any time).

TRANSPORT, STORAGE AND TESTING

Our offshore team has the experience and the equipment to provide the right kind of secure storage for all types of cabling, and to ensure it's accessible so your operating schedules can still be maintained.

This means storing cables in a known environment to ensure their integrity – working with known specialist contractors who can undertake integrity testing for us, on your behalf – and having the transport and facilities to ship cabling at short notice.

PROJECT FLEXIBILITY

We can work in exceptionally short timescales. Our cabling experts know how to set up and commission our 7,000Te onshore capacity basket carousel, loading tower and tensioners so they are all operational in a matter of hours, not days.

WE ARE OSPREY

WE ARE MORE THAN A SPECIALIST LOGISTICS PROVIDER

As a great, British business, we've been providing the multi-mode services and specialist logistics to move some of the world's most challenging critical infrastructure for 25 years.

Every project is a success, thanks to our incredible people, their focus on QHSE, and commitment to delivering the best possible solution – every time.

Many of our team have been with us for 25 years, as have a number of our clients. Whatever kind of cabling or associated infrastructure you're moving, however heavy or unusual the load, it takes the right people to plan specialist logistics – making good use of our previous experience, making sure our equipment is used to best effect.

We always work better, together.
